

Excessive bleeding. Pain. Urinary symptoms.

Women don't have to live with uterine fibroids

Tune in to an alternative
to surgery, LIVE on your
computer.

Thursday, November 13, 2003,

Webcast of a uterine fibroid
embolization (UFE) at Jefferson:

- Discover a new frontline
treatment. As many as 40 percent
of women over age 35 may have

fibroid growths of significant size in their uterus. Hundreds of thousands
receive hysterectomies or other surgery for the problem each year. With UFE,
women can get at the cause while avoiding surgery.

- Get back to life. Fibroid symptoms can be debilitating, but UFE shrinks
fibroids and has many advantages: outpatient procedure; quicker recovery;
effective relief of symptoms.
- Our experts demonstrate this new procedure. Accomplished radiologist
Carin Gonsalves, MD, will perform UFE, as Joseph Bonn, MD, Director of
Jefferson's Division of Interventional Radiology, narrates.
