

# Women don't have to live with uterine fibroids.

## Discover a new frontline treatment, and get back to life.

As many as 40 percent of women over age 35 may have fibroid growths of significant size in their uterus. Some suffer without any treatment; some go through expensive and time-consuming care to try to address the symptoms. Hundreds of thousands receive hysterectomies or other surgery for the problem each year. With a new procedure called uterine fibroid embolization (UFE), women can get at the cause while avoiding surgery. UFE shrinks fibroids and has many advantages:

- outpatient procedure
- quicker recovery
- effective relief of symptoms

From the convenience of your home, office, or laptop computer, watch Carin Gonsalves, MD, perform the UFE procedure.

Division Director Joseph Bonn, MD, will narrate the demonstration.

VIA THE WEB: We suggest that you visit one of the web sites listed at left, in advance, to assure that you have, or that you download (for free!), the RealNetworks software that your PC requires to view our live video webcast.

For more information, or for an appointment, call **1-800-JEFF-NOW**.

If you can't make the live event, a replay version will be available beginning November 14, 2003, at [www.JeffersonHospital.org/webcast](http://www.JeffersonHospital.org/webcast)

Fibroid treatment without surgery. *LIVE* on your computer.
